RESEARCH INTERESTS

My research focuses on integrating heterogeneous domain data through ***multimodal learning***, with the goal of enabling systems to understand and interact with humans across diverse modalities. I explore techniques that effectively combine visual, linguistic, and auditory information, and investigate ***multimodal large language models (MLLMs)*** to extend the capabilities of language models beyond text. Building on this foundation, my current work is centered on developing interactive systems capable of ***socially-aware understanding*** and reasoning across modalities.
